

# Powered by Era, Moxi takes open fit to new heights

The beautiful little canal receiver technology (CRT) features a proprietary open-fit strategy – so your clients can enjoy Moxi attitude with the highest fidelity, most natural sound.

# Open fit goes high-fidelity with Moxi

Powered by Era™, the incredible new sound processing platform from Unitron, Moxi™ offers your clients the most natural, high-fidelity sound, thanks to an open-fit strategy that combines three proprietary technologies:

**1. Automatic Program with SmartFocus™** leverages the power of the Era platform for greater speed, intuition, accuracy and simplicity. High-resolution sensors continuously analyze listening environments, providing real-time information to the classifier, which custom blends Moxi's automatic response. The Automatic Program is further enhanced by clinically proven SmartFocus, optimized in Moxi for an open fit. SmartFocus synergistically combines adaptive features for optimal speech intelligibility or comfort as the situation demands. This innovative, blended automatic approach ushers in a new era of smooth, effortless transitions and a more natural listening experience.

**2. Natural Sound Balance** addresses the open-fit challenge of artifacts that can occur when unamplified sounds enter the ear canal and combine with amplified sounds, making precise adaptive adjustments to preserve one clear, balanced signal.

**3. Pinna Effect** recreates the natural acoustics of the ear's pinna to provide a much more true-to-life directionality in an open-fit BTE, particularly in the high frequencies.

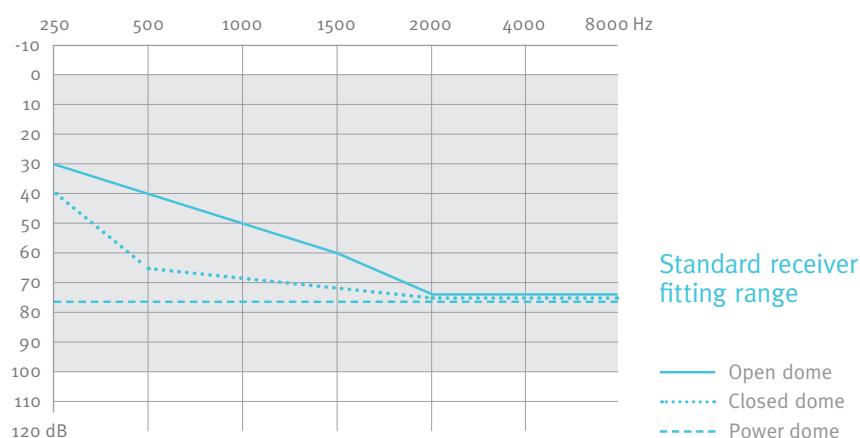

## Wireless convenience with Binaural Phone

Moxi's Binaural Phone conveniently streams audio signals from the phone ear to the opposite ear without a separate accessory, for clear, balanced phone conversations.

## Ultimate fitting flexibility

A choice of three receivers satisfies mild to severe hearing losses.
